Technology Selection Criteria for NEPP Investigation

- **The technologies should satisfy all or most of the following criteria:**
 - Wide applicability,
 - Product level or in productization, and,
 - No distinction: COTS to hi-reliability aerospace.
- **In general, we avoid:**
 - Laboratory technologies, e.g., <TRL3,
 - Limited application devices with certain exceptions (critical application or NASA center specialization).
- **Note: Partnering arrangements with other organizations preferred.**
 - Industry examples: Microsemi, Xilinx, Altera, TI
 - Other U.S. Government: AF SMC, AFRL, DTRA, Navy Crane

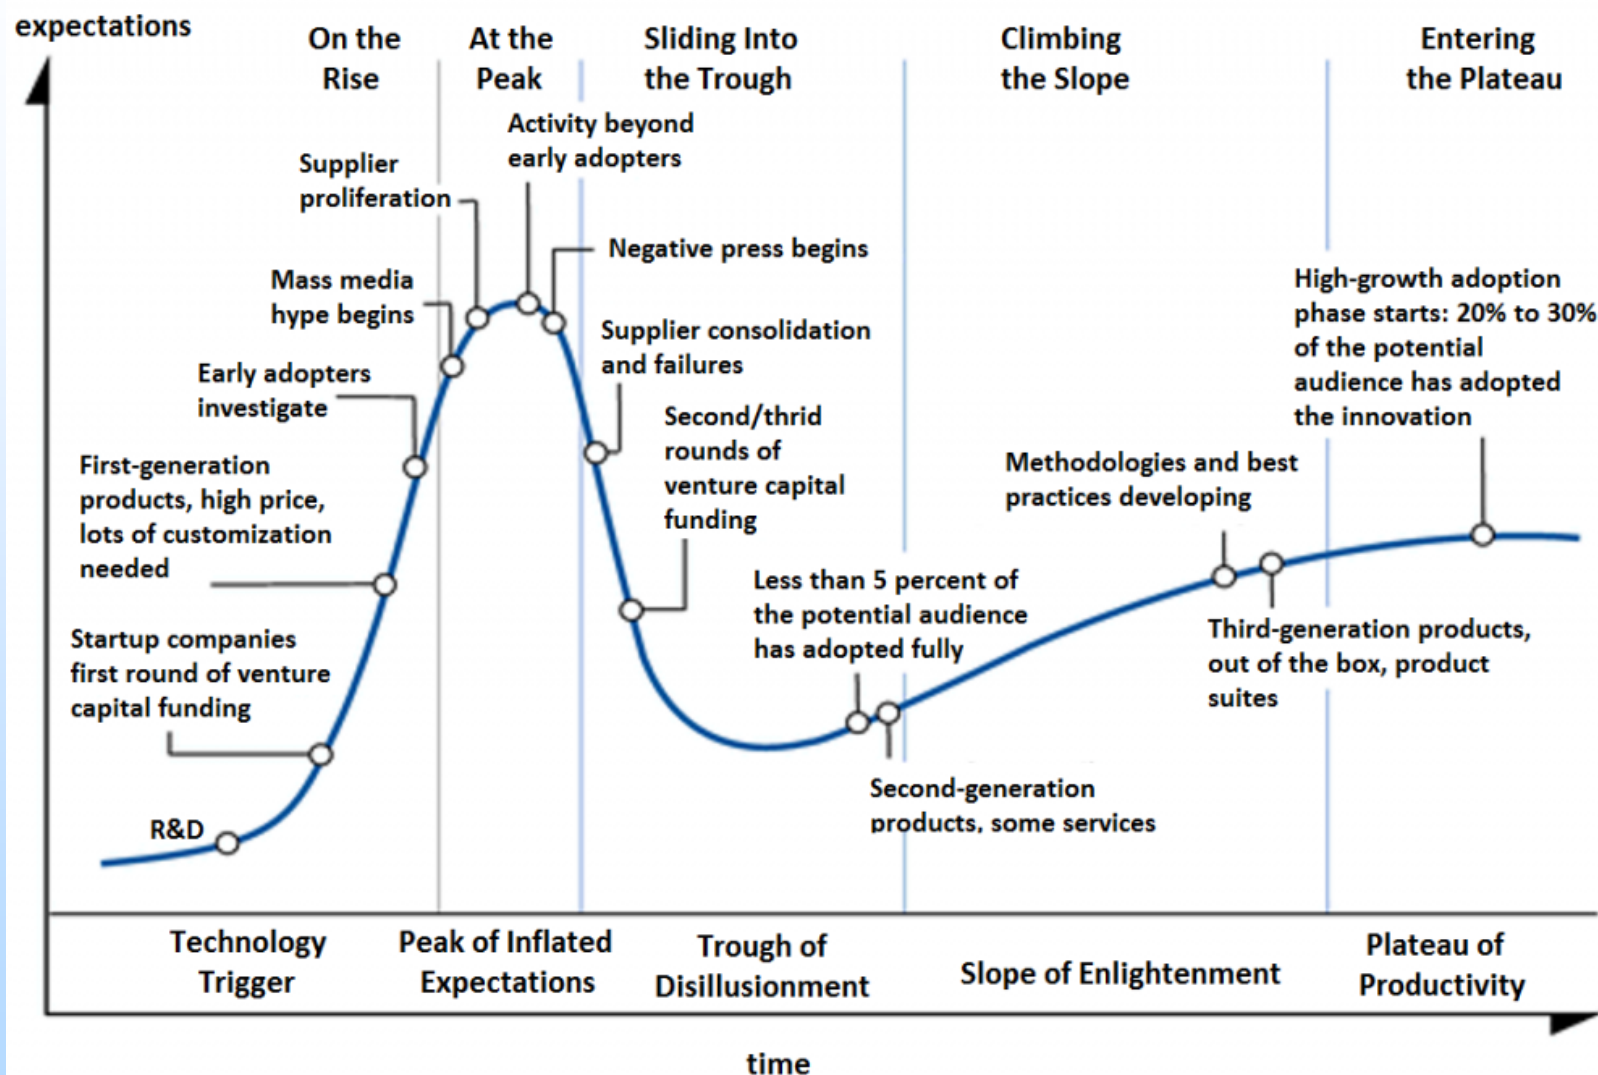

Technology Investigation Roadmap Discussion

- Technology assurance efforts are not explicitly included except on “Small Missions” chart.
 - *Guidelines are a product of many technology evaluation tasks.*
- Only major product categories shown.
- Technology areas not on Roadmap but under consideration include:
 - Electro-optics (fiber optics),
 - Advanced analog and mixed-signal devices,
 - Imaging sensors,
 - Modeling and simulation,
 - High-speed communication (SERDES, fast data switches), and,
 - Adjunct processors (eg., graphics, signal processing)
- Note 1: Advanced CMOS technologies not explicitly included:
 - NEPP leverages samples from ongoing DoD and/or commercial sources.
 - 14nm is current target (IBM/GF, INTEL).
- Note 2: “Reliability testing” may include product and/or package testing.
